...

In the spring the Continental Polar air masses are extremely dry and cold. As these air masses are brought down into the U.S. they form cold fronts which drive into the warm moist air from the Gulf of Mexico. This creates cold fronts that are very severe and can produce damaging storms and tornadoes.

## **Air Masses and Fronts Article with Annotations and Questions**

A large body of air with the same characteristics of temperature and moisture content is known as an air mass. An air mass receives its characteristics from the location it forms, know as its source region. Fronts represent the advancing edge of the air mass at ground level. Only low pressure systems have fronts, due to air masses converging at the low pressure. There will be much more on pressure systems and fronts in a future lesson.
