### Electromagnetic Fields Wangsness Roald K

An electromagnetic field (also EM field) is a classical (i.e. non-quantum) field produced by accelerating electric charges. It is the field described by classical electrodynamics and is the classical counterpart to the quantized electromagnetic field tensor in quantum electrodynamics. The electromagnetic field propagates at the speed of light (in fact, this field can be identified as light) and ...

İndüktans elektromanyetizma ve elektronikte bir indüktörün manyetik alan içerisinde enerji depolama kapasitesidir. İndüktörler, bir devrede akımın değişimiyle orantılı olarak karşı voltaj üretirler. Bu özelliğe, onu karşılıklı indüktanstan ayırmak için, aynı zamanda öz indüksiyon da denir.Karşılıklı indüktans, bir devredeki indüklenen voltajın başka bir ...
