FUNDAMENTAL REAL ANALYSIS by S L Gupta & Nisha Rani Gupta

The theorems of real analysis rely intimately upon the structure of the real number line. The real number system consists of an uncountable set (\mathbb{R}), together with two binary operations denoted $+$ and \cdot , and an order denoted $<$. The operations make the real numbers a field, and, along with the order, an ordered field. The real number system is the unique complete ordered field, in the sense that ...

Analysis on the real number line, such as one encounters in an introductory course at the advanced undergraduate level (using, say, Rudin's Principles of Mathematical Analysis as a textbook), constitutes only a preliminary to a vast and far-reaching domain, the subject of real analysis properly so called. Hence, as a beginning graduate student, it is imperative to return to the subject and ...

$L_p(S, \mu) \subset L_q(S, \mu)$ iff S does not contain sets of non-zero but arbitrarily small measure. Neither condition holds for the real line with the Lebesgue measure. In both cases the embedding is continuous, in that the identity operator is a bounded linear map from L_q to L_p in the first case, and L_p to L_q in the second.
