Solutions

Solution. (a) True: Suppose $a = p_1^{n_1} \dots p_k^{n_k}$. Then $a \mid b^n$ implies $b^n = p_1^{n_1} \dots p_k^{n_k} q_1^{m_1} \dots q_l^{m_l}$. This means $b = p_1^{n_1/n} \dots p_k^{n_k/n} q_1^{m_1/n} \dots q_l^{m_l/n}$, i.e. $a \mid b$. (b) False: Let $n = 8$ and $m = 12$. (c) True: If a is odd then $(a; 2) = 1$ and $a \mid b^n$, hence (a) implies $a \mid b$. Now suppose $a = 2^s d$ where $s > 0$ and d is odd. Since $a \mid b^n$, $2^s \mid b^n = 2^{ns} d^n$ for some

In mathematics, analytic number theory

Read Book Analytic Number Theory Apostol Solutions

is a branch of number theory that uses methods from mathematical analysis to solve problems about the integers. It is often said to have begun with Peter Gustav Lejeune Dirichlet's 1837 introduction of Dirichlet L-functions to give the first proof of Dirichlet's theorem on arithmetic progressions. It is well known for its results on prime numbers

Undergraduate Texts in Mathematics

Read Book Analytic Number Theory Apostol Solutions

Remember it is ANALYTIC number theory, so it is more concerned with deriving proofs, rather than stating them for the general reader. Apostol's exposition and writing style does half the magic. For a general book on Number Theory try Ogilvy or for basic introduction into proofs of Number Theory try GA Jones or Dudley.
